Math · Theory

Year 2 · 3rd term · Length, perimeter, 3D solids, data, probability, multiplication and division

UNIT 8 · LESSON 1 OF 7

1 Words to compare and measure

What is length?

Length is how long something is, from one end to the other.

Long means how much something measures from one end to the other: “This pencil is long.”

Units — we measure length in centimetres (cm), metres (m) and kilometres (km).

Short, longer and shorter

Short means not as long: it measures a smaller length from one end to the other. “This pencil is short.”

Longer — the top pencil is longer.

Shorter — the bottom pencil is shorter.

Wide and narrow

Wide means how much something measures across: “This book is wide.”

Narrow means not wide: the thin book is narrow.

Wider — the big book is wider.

Tall and height

Tall means how high something is, from the bottom to the top: “This tree is tall.”

Taller and shorter — the big tree is taller; the small tree is shorter.

Height is how tall someone or something is. We also use tall to talk about the height of people: “This girl is tall.”

Write it! Escreva

Look at the pencils. Which pencil is longer? Write a sentence.

Pencil ____ is _____

_____

UNIT 8 · LESSON 2 OF 7

2 Perimeter

What is perimeter?

Perimeter is the total distance around a shape.

A side is one of the straight lines of a flat shape. A rectangle has 4 sides.

Around means along all the sides of the shape. We also say “distance around”.

Add all the sides!

Top and bottom — 6 cm + 6 cm.

Left side and right side — 4 cm + 4 cm.

Perimeter — 6 + 6 + 4 + 4 = 20 cm.

The unit — always write the number and the unit: 20 cm.

More shapes

Square — 5 + 5 + 5 + 5 = 20 cm.

Rectangle — 8 + 8 + 3 + 3 = 22 cm.

Triangle — 6 + 6 + 6 = 18 cm.

Write it! Escreva

What is perimeter? Find the perimeter of the rectangle. Show your work.

Perimeter is

My work:

The perimeter is _____ cm.

3

UNIT 6 · LESSON 3 OF 7

3D solids

What is a 3D solid?

A 3D solid is a solid shape that has faces, edges and vertices. A cube is a 3D solid.

A face is a flat (straight) surface of a 3D solid.

An edge is a straight line where two faces meet.

A vertex is a corner where two or more edges meet. More than one vertex: vertices.

The cube

Faces — a cube has 6 faces.

Vertices — a cube has 8 vertices.

Edges — a cube has 12 edges.

Cube, cuboid and pyramid

Cube — 6 faces, 12 edges, 8 vertices.

Cuboid — 6 faces, 12 edges, 8 vertices. It looks like a cube, but its edges are not all the same length.

Pyramid — 5 faces, 8 edges, 5 vertices.

Flat or curved?

A curved surface is round, not flat. A cylinder, a cone and a sphere have a curved surface.

Cylinder — 2 flat faces and 1 curved surface.

Cone — 1 flat face and 1 curved surface.

Sphere — 1 curved surface. No flat face, no edges, no vertices.

Stay still or roll?

Roll means to move by turning over and over, like a ball.

Flat faces — the cube can stay still on top of other flat surfaces. It cannot roll.

Curved surface — the sphere can roll away.

Write it! Escreva

Count and complete the sentences.

The cube has _____ faces, _____ edges and _____ vertices.

The pyramid has _____ faces, _____ edges and _____ vertices.

UNIT 5 · LESSON 4 OF 7

4 Data and graphs

What is data?

Data is all the information we collect and find out. We organize it using charts and graphs.

A piece of data is one simple fact: "My favorite color is blue." "I have 2 pets."

Charts and graphs — the two pictures organize data.

A bar graph

A bar graph shows data with bars. The taller the bar, the more there are.

Each bar — one group: hamsters, rabbits, dogs or cats.

How many — look at the top of the bar and read the number on the side.

Read the bar graph

How many — hamsters 4, rabbits 2, dogs 6, cats 3.

The most — dogs: the tallest bar.

The fewest — rabbits: the shortest bar.

Make a bar graph

The table — shows the number of each group.

Color each bar — up to its number.

Dogs: 6 — color the dogs bar up to 6.

Write it! Escreva

Look at the bar graph and answer with a sentence.

a) Which fruit do most children like?

Most children like _____

b) Which fruit has the shortest bar?

The shortest bar is _____

c) How many children like bananas?

___ children like bananas. _____

UNIT 5 · LESSON 5 OF 7

5 Probability

What is probability?

Probability is thinking about if something will happen, won't happen, or will maybe happen.

The arrow — at the top, it will happen; at the bottom, it won't happen.

Certain and impossible

Certain means we know it will happen: "I will eat dinner tonight."

Impossible means we know it won't happen: "I will eat rocks for dinner." "A unicorn carries you to bed."

Likely and unlikely

Likely means big chance to happen: "You will find students in the school."

Unlikely means small chance to happen: "You will see a penguin in the desert."

Possible

Possible means it will maybe happen: "I will eat spaghetti for dinner." "I will read a book."

From the top — certain, likely, possible, unlikely, impossible.

Write it! Escreva

Write certain, likely, possible, unlikely or impossible.

a) You will eat dinner tonight. _____

b) You will find students in the school. _____

c) You will read a book after dinner. _____

d) You will see a penguin in the desert. _____

e) A cat will fly to the moon. _____

6

UNIT 10 · LESSON 6 OF 7

Multiplication: making groups

What is multiplication?

Multiplication is a shorter way to show repeated addition. We use it to find the total when we have equal groups.

Equal groups have the same amount in each group.

Repeated addition is adding the same number again and again: 3 + 3 + 3 + 3.

4 groups of 3

Repeated addition — 3 + 3 + 3 + 3 = 12.

A multiplication sentence is the math written with numbers and signs: 4 × 3 = 12. 3 + 3 + 3 + 3 = 12 is an addition sentence.

4 × 3 — 4 groups, 3 buttons in each group.

Altogether — 4 groups of 3 buttons are 12 buttons altogether.

More groups

Flowers — 5 + 5 + 5 = 15, so 3 × 5 = 15. 3 groups of 5 flowers are 15 flowers altogether.

Cookies — 2 + 2 + 2 + 2 + 2 = 10, so 5 × 2 = 10. 5 groups of 2 cookies are 10 cookies altogether.

Our hands

2 hands — 5 fingers on each hand.

Repeated addition — 5 + 5 = 10.

Multiplication sentence — 2 × 5 = 10.

Write it! Escreva

How many cherries are in each group? Write the addition sentence. Write a multiplication sentence.

In each group: _____

Addition sentence:

_____

Multiplication sentence:

_____

Multiplication is

_____

UNIT 10 · LESSON 7 OF 7

7 Division: equal sharing

What is division?

Division is a way to make equal groups of a number. We share a total into groups that have the same amount.

Share equally means everybody gets the same amount.

Division sentence — 10 ÷ 2 = 5: 10 oranges shared into 2 equal groups is 5 oranges in each group.

More sharing

Apples — 8 ÷ 2 = 4: 8 apples shared into 2 equal groups is 4 apples in each group.

Cookies — 12 ÷ 3 = 4: 12 cookies shared into 3 equal groups is 4 cookies in each group.

Even and odd: into 2 groups

Even numbers (0, 2, 4, 6, 8, 10, 12...) can be shared equally into 2 groups.

Odd numbers (1, 3, 5, 7, 9...): when we share them between 2, 1 is left.

8 ÷ 2 = 4 — 4 in each group. Nothing is left.

7 between 2 — 3 each, and 1 is left.

Write it! Escreva

Mike and Laura share 10 oranges equally. How many oranges does each one get? Write the division sentence.

Division sentence:

Each one gets _____ oranges.
